Generative AI-Powered AI Text_to_image Generator

PRESENTED BY : PRAVEEN DWIVEDI

INSTITUTION: UNITED COLLEGE OF ENGINEERING & RESEARCH, NAINI, PRAYAGRAJ

UNIVERSITY ROLL NO.: 2300100100281

OBJECTIVES

- **The purpose of AI text to image generator is to generate visual content ,including images, artwork, and designs, by using advanced computational techniques.**
- **Digital art and creative content.**
- **Education and training.**
- **Medical applications and artistic exploration.**

Challenges & Solutions

1. Ambiguity in Prompts

Challenge: Text can be vague or have multiple meanings.
Solution: Use descriptive prompts and train models to better understand context.

2. Inconsistent Output

Challenge: Images may have unrealistic features (e.g., extra limbs).
Solution: Use advanced models with spatial attention and post-processing.

Advantages

1. Transforms text into visuals quickly and creatively.

2. Reduces the cost and time of manual image creation.

3. Allows anyone to create art without design skills.

4. Enables fast prototyping for various industries.

5. Supports visual learning in education.

Source code

```python
import torch
from diffusers import StableDiffusionPipeline, DPMSolverMultistepScheduler

small_model = "stabilityai/stable-diffusion-2-1"

pipe = StableDiffusionPipeline.from_pretrained(small_model, torch_dtype=torch.bfloat16)
pipe.scheduler = DPMSolverMultistepScheduler.from_config(pipe.scheduler.config)
pipe.enable_attention_slicing()
pipe = pipe.to("cuda")

prompts = [
"a programmer touching grass",
"A dreamlike landscape with floating islands and waterfalls under a starry sky.",
"A Roman soldier standing guard in front of the Colosseum during sunset.",
"A cyberpunk character with neon tattoos in a rain-soaked alley."
]

results = pipe(
prompts,
num_inference_steps=50,
guidance_scale=3.5,
height=512,
width=512
)

images = results.images

# Save or display the images
for i, img in enumerate(images):
img.save(f"image_{i}.png")  # Save each image
```

These are following which will be pip install

diffusers[torch]

huggingface_hub

transformers

accelerate

sentencepiece

protobuf

How it works

Create and Activate a Virtual Environment:

python -m venv myenv
source myenv/bin/activate # On Windows use `myenv\Scripts\activate`

Install library which i written in previous page.

Create Hugging face account and access token and login

Run the program

Test any prompts

Thank you
